It's 1994, and Juliet and Lucas couldn't be more different. She's an honor student on the fast track to college and a high-profile career. He's a hockey player whose future begins the day he's old enough to follow the family tradition and join the marines. Nevertheless, they fall hard for each other. The one thing that keeps this from being a typical high-school romance is that Lucas already remembers their first kiss, their first dance, the gift Juliet's going to give him for Christmas. He tells her that George H. W. Bush's son will become president and that there will be another war in the Middle East—a war in which he will die. Crazy? Or is he really telling the truth when he convinces Juliet that he knows he's reliving his past . . . their past? This delicate injection of time travel spices up the realistic contemporary story as the characters deal with the stress of high school, friendships, goals, and family. Give this to readers who enjoyed Kimberly Derting's [The Taking](#) (2014).— *Jeanne Fredriksen*
